

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-30 (Canceled).

31. (Currently Amended) ~~An arrangement at an open computer network wherein communication possibilities are created between persons or agents, who request access to a same information, or to amounts of related information in form of, for instance, a same storing place, a same speciality, a same author, or a same publisher, the information or amount of information may have which ever storing place, owner, author and publisher in the open network that suits.~~

A system for communicating over an open computer network comprising:  
a first terminal configured to access a first information site and to acquire a client program from a management unit;  
said client program reads an internet address of the first information site in a web crawler of said first terminal;  
said client program sends a message to said management unit, said message includes the internet address of the first information site;  
said management unit is configured to access a database and determine what world is associated with the internet address of the first information site;  
said first terminal is further configured to conduct a communication with another terminal accessing a related information site,  
wherein said related information site is part of a same world as the first information site, and

and related information sites include identical information sites, information sites that are stored in the same place, information sites that have a same author, information sites that have a same specialty, and information sites that have a same publisher.

32. (Currently Amended) An arrangement The system as claimed in claim 31, wherein either prepared [[and]] or not prepared meetings are possible to establish established on any website where the persons or agents users of the terminals do not need to search for [[a]] special or special meeting places, such as chatrooms said special places including at least a chat room.

33. (Currently Amended) An arrangement The system as claimed in claim 31, wherein said communication possibilities between the first terminal and another terminal include is a direct communication.

34. (Currently Amended) An arrangement The system as claimed in claim 33, wherein said direct communication can be is one of written [[or]] and oral dialogue in real time.

35. (Currently Amended) An arrangement The system as claimed in claim 31, wherein said communication possibilities between the first terminal and another terminal include includes virtual meetings.

36. (Currently Amended) An arrangement The system as claimed in claim 35, wherein said communication possibilities between the first terminal and another terminal

~~include functions to make~~ includes making files accessible to all participants in said virtual meeting.

37. (Currently Amended) ~~An arrangement~~ The system as claimed in claim 31, wherein said communication ~~possibilities~~ between the first terminal and another terminal ~~include~~ includes distribution of address information [[to]], and a picture of [[,]] ~~said persons~~ users of terminals, ~~and address information and a picture related to said agents..~~

38. (Currently Amended) ~~An arrangement~~ The system as claimed in claim 31, wherein said open computer network is Internet or other network, ~~for instance an intranet~~, ~~which utilizes the same technology as Internet~~, and ~~said access to~~ at least one information site ~~and amounts of information~~ ~~include visits to~~ includes at least one web page, and wherein said other network includes at least an intranet.

39. (Currently Amended) ~~An arrangement~~ The system as claimed in claim 38, wherein said communication ~~possibilities~~ between said first terminal and another terminal is [[are]] created between visitors to a same web page, or to a web page that is included in an identified amount of web pages.

40. (Currently Amended) ~~An arrangement~~ The system as claimed in claim 39, wherein said identified ~~amounts~~ amount of web pages ~~address~~ include at least one of, web pages related to persons who have a common interest, ~~by the web pages within a same amount being, for instance,~~  
web pages stored at a same server,  
web pages stored at a same group of servers,  
web pages dealing with [[the]] a same speciality,

web pages belonging to a same organization, [[or]] and  
web pages having a same publisher, author, or constructor.

41. (Currently Amended) An arrangement The system as claimed in claim 38,  
wherein said communication possibilities between the first terminal and another terminal is  
[[are]] allowed on [[just]] any web page.

42. (Currently Amended) An arrangement The system as claimed in claim 38,  
wherein the user's a current IP-address for each terminal is utilized to establish  
communication.

43. (Currently Amended) An arrangement The system as claimed in claim 39,  
including the following parts:

~~client program/additions to a program, which can be loaded to the user's terminal;~~  
~~central management functions, which manage the arrangement and that communicate~~  
~~with users;~~  
wherein said [[a]] database, which stores is configured to store information about  
users and information regarding appointment of said identified amounts amount of web  
pages.

44. (Currently Amended) An arrangement The system as claimed in claim 31,  
wherein necessary resources for the user's first terminal-working place, in addition to standard  
applications to create access to information, can be are loaded by the open computer network  
and [[be]] installed at the first terminal-working place.

45. (Currently Amended) ~~An arrangement~~ The system as claimed in claim 31, wherein users can register the following information comprising:

a picture of the user;

identity information ~~such as~~ including the user name [[and]] or organizational affiliation;

address information, ~~such as~~ including an address to establish communication[[],]  
~~telephone numbers, e-mail address;~~ and

biographical data.

46. (Currently Amended) ~~An arrangement~~ The system as claimed in claim 39, wherein said virtual meetings ~~give possibility to~~ include at least one of:

chatting,

communication of files,

management of files in common,

access rights to communicated files and files in common,

access to address information of the participants in the meeting, and

showing of pictures of participants of the meeting.

47. (Currently Amended) ~~A method to create, in an open computer network, virtual meetings between persons or others playing a part, for instance agents, who have an interest in common, who visit websites, included in a number of websites, which persons with a common interest are expected to visit, wherein said meetings are established without activating measures needed to be taken by any of the participants in the meeting.~~

A method of creating virtual meetings in an open computer network between a first terminal and another terminal accessing a related information site, the method comprising:

accessing a first information site from a first terminal and acquiring a client program from a management unit, said client program reads an internet address of the first information site in a web crawler,

sending a message to said management unit, said message including the internet address of the first information site, and

establishing communications between the first terminal and another terminal accessing a related information site;

accessing a database and determining what world is associated with the internet address of the first information site, and

wherein the related information sites include identical information sites, information sites that are stored in the same place, information sites that have a same author, information sites that have a same specialty, and information sites that have a same publisher.

48. (Currently Amended) [[A]] The method as claimed in patent claim 47, wherein said virtual meetings are established independent of the place a location of [[the]] participants of the virtual meeting or address in the network.

49. (Currently Amended) [[A]] The method as claimed in patent claim 47, wherein [[the]] participants of said virtual meeting are given, information about [[the]] identities of other participants, for instance in form of including at least one of a name, or an organizational affiliation, and stored picture or direct transmission of moving picture.

50. (Currently Amended) [[A]] The method as claimed in ~~patent~~ claim 47, wherein the participants of said virtual meeting are given information about [[the]] an address of other participants[[,]] ~~for instance e-mail address and current IP address.~~

51. (Currently Amended) [[A]] The method as claimed in ~~patent~~ claim 47, wherein [[the]] participants of said virtual meeting can carry on ~~conversation, for instance one of a~~ written [[or]] and oral conversation.

52. (Currently Amended) [[A]] The method as claimed in ~~patent~~ claim 47, wherein files can be opened for [[the]] participants at said virtual meeting.

53. (Currently Amended) [[A]] The method as claimed in claim 47, wherein participants of said virtual meeting can make files and documents accessible to other participants at said virtual meeting.

54. (Currently Amended) A method as claimed in claim 47, wherein said open computer network is Internet or other network[[,]] ~~for instance an intranet, which utilizes the same technology as Internet.~~

55. (Canceled).

56. (Currently Amended) [[A]] The method as claimed in ~~patent~~ claim 54, wherein said virtual meetings:

are prepared or not prepared; and

are established between visitors to web pages that are located within the same world, where a world is an amount of web pages that persons who have interests in common can be expected to visit.

57. (Currently Amended) [[A]] The method as claimed in ~~patent~~ claim 56, wherein modifications of web pages within the world, or of web servers from where said web pages are loaded to establish virtual meetings, are not needed.

58. (Currently Amended) A method as claimed in claim 56, wherein web pages within a same world are either located to a same server, to a same node, deal with a same speciality specialty, have a same authors author, have a same publishers publisher, or belong to a same organization.

59. (Currently Amended) [[A]] The method as claimed in claim 54, wherein a support staff, or selling staff, of a company ~~have a possibility to~~ can see who is visiting the web site of the company and [[to]] can communicate directly with these visitors.

60. (Currently Amended) [[A]] The method as claimed in claims 54, wherein [[the]] a current IP-address of each participant of the virtual meeting is utilized to establish communication between [[the]] participants of the meeting.
